Address: 29 rue Jean-Pierre Sauvage, 2514 Luxembourg

Summary

Senior telecom and software engineering professional with 20+ years of international experience at Ericsson, including technical lead responsibilities, backend-oriented automation, large-scale network configuration, testing, and database-backed rollout activities. Strong Python and scripting background, deep domain knowledge in telecommunications, and proven delivery in complex multi-country projects.

Recent academic and hands-on work further strengthened my software engineering profile through AI/ML projects, LLM-based software testing research, and the 42 Luxembourg curriculum in C/C++, Unix, networking, web, and systems programming. I am targeting senior software engineering roles where my technical leadership, telecom expertise, backend mindset, and modern software upskilling can contribute to cloud and full-stack product development.

Education

- **Present:** 42 School, Luxembourg
[Project-based learning](#), currently at level 9.70 with 87% of the common core completed; hands-on work in C, C++, Unix, networking, systems programming, graphics, and web fundamentals
- **September 2024:** University of Luxembourg
Master in Space Technologies and Business
- **June 1991:** Technical University of Cluj-Napoca, Romania
Electronics & Telecommunication

Relevant Skills and Experiences

- **Technical Leadership & Delivery:** Led and supported complex telecom modernization and rollout projects across 20+ countries, coordinating implementation, procedures, tooling, and execution in live environments.
- **Backend Automation & Scripting:** Proficiency in Python and Perl for configuration generation, process automation, rollout support, and data handling in telecom and network engineering contexts.
- **Telecommunications Domain Expertise:** Extensive experience across mobile and fixed networks, including 2G/3G/4G/5G, RAN, RNC, MSS, IN, deployment, integration, support, load testing, and network modernization.
- **Software Testing using LLMs:** Studied the possibility to use LLMs for testing of space software and wrote my [master thesis](#) in this subject.
- **Scientific Space Project:** Generation of Training Images for Lens Flare Removal – developing the LFW ([Lens Flare Wizard](#)), a Python and Blender-based toolkit for augmenting training datasets with realistic lens flare effects to train computer vision models against lens flare artifacts.

- **AI & Machine Learning:** Developed a concept for mass configuration of telecom equipment using ML/AI and complemented it with extensive self-study and graduate-level project work.
- **Systems, Networking & Web Foundations:** Built strong low-level software foundations at 42 Luxembourg, including sockets, processes, Linux/Unix, concurrency, graphics, and web fundamentals relevant to backend and full-stack engineering.
- **Databases & Data Handling:** Managed and used operational databases in rollout and modernization activities; comfortable working with structured data, XML, JSON, and Python data tooling.
- **Teamwork & Communication:** Worked in 20+ countries ([resume-references.pdf](#)). Collaborated with diverse teams across different projects. Provided support and effectively communicated with POs (Product Owners).

Languages

English:	C2 – Fluent
Romanian:	C2 – Fluent
French:	B2 – Intermediate
German:	B1 – Intermediate
Hungarian:	L1 – Mother tongue

Technical Strengths

Languages:	Python, C, C++, Perl, JavaScript fundamentals, LaTeX
Backend / Data:	XML, JSON, numpy, pandas, matplotlib, scripting, automation
Systems / Web:	Unix/Linux, sockets, processes, networking, HTTP, web fundamentals
Tools:	Git, Visual Studio Code, Jupyter Notebook, Blender
AI / LLM:	MS Copilot, Claude Code, MCP, Skills, LangChain

Selected Work Experiences with Ericsson

- **Apr 2015 – Apr 2023, Budapest:** Business Analyst / Software Tester
 - Worked on mass configuration concepts for telecom equipment using AI and ML.
 - Designed and performed load tests on routers and 4G/5G telecom nodes.
 - Contributed to software quality, large-scale configuration validation, and backend-oriented test preparation.
- **Nov 2014 – Mar 2015, Budapest:** Consultant
 - Advised on the development of a configuration tool for RAN telecom nodes.
- **Jul 2014 – Oct 2014, Budapest:** Network Optimization Engineer
 - Implemented and developed scripts for Irish operator networks to improve RAN performance.
- **May 2013 – Jun 2014, Dublin:** 4G Rollout, RAN modernization Technical Lead
 - Led development and implementation of scripts, procedures, and databases for O2 and Meteor 4G rollout activities.
 - Developed scripts and procedures for Vodafone Ireland 3G RBS rehomings.
 - Combined technical leadership, delivery coordination, automation, and operational rigor in a live telecom environment.
- **Feb 2011 – Dec 2012, Düsseldorf:** Integration & Configuration & Procedure Development
 - Developed and executed RNC data conversion and modernization swap procedures for live networks.

- Delivered a successful rollout approach despite developing the procedure without access to test nodes.
- **Feb 2010 – Feb 2011, Dublin:** Network Integration and Automation Engineer
 - Performed RBS swap and integration in Vodafone, O2, and Meteor networks in Ireland.
 - Wrote Perl scripts to generate RBS configuration files.

Relevant AI/ML Online Courses

- **LLM Engineering:**
 - Master AI, Large Language Models & Agents
- **Andrej Karpathy's Tutorials:**
 - GPT Tokenizer
 - Reproducing GPT-2
- **Udacity:**
 - Self-Driving Car Nanodegree (T1)
 - Machine Learning Engineer Nanodegree
 - Deep Learning Foundations Nanodegree
- **Coursera:**
 - Machine Learning (Stanford University)
 - Using Databases with Python (University of Michigan)
 - State-Estimation and Localization for Self-Driving Cars (University of Toronto)
